

Advancing Sustainable Energy for Europe

Quarterly Fact Sheet as of 30/06/2016

eeef highlights

The European Energy Efficiency Fund's (eeef) annual general meeting (AGM) was held in May. During the meeting the shareholders approved the highest dividend disbursement in the history of the Fund. The eeef was setup in 2011 and has been profitable and paying annual dividend payments since 2013. In addition to the dividend payments, the eeef has funded its own Technical Assistance facility to support the development and implementation of energy efficiency, renewable energy and clean urban transport projects within the public sector. Once these projects are investment ready, the eeef can provide financing.

In June, the eeef completed the final loan disbursement to the Jewish Museum Berlin as Johnson Controls had successfully implemented the planned energy efficiency measures. The measures included a new hydraulic balanced heating system and new fans within the museum and all implemented energy conservation measures are estimated to save 26% carbon emissions, compared to baseline. The project won the European Energy Service Initiative's Award for the best European energy efficiency service project in 2011.

Existing projects

<p>Project: Jewish Museum Berlin</p> 	<p>Country: Germany Sector: Energy Efficiency Type of Investment: Forfeiting Total project size (€ m): 1.4 eef investment size (€ m): 0.9 Financial close: 20 March 2012 Maturity: 10 years Status: In construction</p>
General description	
<p>Johnson Controls' Energy Service Company (ESCO) and the Jewish Museum Berlin entered into an amended Energy Performance Contract (EPC) for both buildings of the museum with a total EPC volume of € 1.4m. Agreeing on energy efficiency measures comprising of the optimisation of heating, ventilation & air conditioning and an efficient energy management system, the project is expected to achieve a 26% reduction of CO₂ emissions compared to the baseline. It is a lighthouse project because of its innovative financing structure using forfeiting as a funding source.</p>	
Recent developments	
<ul style="list-style-type: none"> Final disbursement to finance energy efficiency measurements in June 2016 	
<p>Project: University of Applied Sciences Munich</p> 	<p>Country: Germany Sector: Energy Efficiency Type of Investment: Forfeiting Total project size (€ m): 1.1 eef investment size (€ m): 0.6 Financial close: 15 November 2012 Maturity: 10 years Status: In operation</p>
General description	
<p>Johnson Controls' ESCO and the University of Applied Sciences Munich (UoM) entered into an energy performance contract (EPC) for both buildings of the UoM's campus in Munich-Pasing with a total EPC volume of € 1.1m. The ESCO and UoM agreed on energy efficiency measures comprising the acquisition of a 49.5 kW combined heat and power (CHP) plant, the optimisation of heating, lighting, metering, building management and pumping. The implementation of all measures achieves an 11.6% reduction of CO₂ emissions compared to the baseline. The ESCO guarantees the UoM certain energy savings p. a. and performs maintenance and building operation services for the 10 year contract period. This project is a role model for further energy efficiency investments in educational facilities such as schools, universities etc.</p>

<ul style="list-style-type: none"> Project performance in line with envisaged plan 	
<p>Project: City of Orléans</p> 	<p>Country: France Sector: Energy Efficiency Type of Investment: Junior Funds Total project size (€ m): 36.0 eef investment size (€ m): 5.1 Financial close: 12 March 2013 Maturity: Perpetual Status: In operation</p>
General description	
<p>The CHP plant with an installed capacity of 7.5 MW in electricity and 17 MW in thermal heat supplies the heat to the City of Orléans and sells the electricity via a Power Purchase Agreement (PPA) to Electricité de France (EDF) at a negotiated tariff fixed over 20 years. The plant is fired by wood biomass (90,000 tonnes p. a.) from a supply radius of less than 100 km. This project is the first equity investment of eef (majority owner of the plant with 84%). The operation of the CHP plant achieves a reduction of CO₂ emissions by 20,500 tonnes p. a., approx. 89.1% compared to the baseline.</p>

General description																	
<p>The project entity, Progetto ISOM S.p.A., a special purpose vehicle (SPV) which is the counterparty of eef, signed a concession agreement with the University Hospital S. Orsola Malpighi (UHSOM) in Bologna. Planned initiatives are intended to raise the energy efficiency of the entire fluid production and distribution system and reduce energy consumption via adoption of energy efficient equipment such as centrifugal chillers and absorbers, reconstruction of heat distribution networks, renovation of heat exchange substations and inclusion of a tri-generation plant for the combined production of cooling, heat and power (CCHP) sized on the basis of the energy consumption of the hospital facility which is fuelled by methane gas. The project will achieve a reduction of CO₂ emissions by 14,136 tonnes p. a., approx. 31% compared to the baseline. It has been the largest energy efficiency upgrade in Italy under a public-private partnership (PPP) framework so far and is a lighthouse project which demonstrates the positive impact of energy efficiency measures in public healthcare.</p>

General description																	
<p>The fund has completed its second equity transaction, investing in Rennes Biomasse Energie, which operates a combined heat and power facility with an electrical output of 9.8 MWe and thermal output of 22 MWth over 20 years. This junior fund investment has been realised through the purchase of 85 % of the shares of Rennes Biomasse Energie by eef. Dalkia France is co-investor along with eef and is shareholder of the remaining 15 % of Rennes Biomasse Energie. The plant supplies 21,000 households in the city with green heat. The facility is estimated to save 37,063 tonnes of CO₂ per year.</p>

<p>Project: Société Publique Locale Efficacité énergétique (SPL)</p> 	<p>Country: France Sector: Energy efficiency measures, public buildings upgrades Type of Investment: Senior Debt Total project size (€ m): approx. 25 eeef investment size (€ m): 5.0 Financial close: 3 April 2014 Maturity: 5 years Status: Implementation phase</p>
General description	
<p>The Société Publique Locale d'Efficacité Énergétique (SPL) signed a mid-term loan agreement for € 5m to finance the refurbishment of public buildings during their construction phase and to pave the way for raising further long term financing. The SPL was initiated by the Région Rhône-Alpes as a private special purpose company under the French Commercial Code, but operating with public capital. It is associated with a number of public authorities in the region and is dedicated to implementing energy-efficient refurbishment projects of public buildings (high schools, schools and gymnasiums), including renewable energy production. By setting an example of upgrading public buildings, while going beyond standard thermal regulations, the SPL is thinking ahead and aims to achieve its long-term objectives of energy savings and greenhouse gas reduction.</p>

<p>Project: City of Venlo</p> 	<p>Country: The Netherlands Sector: Energy Efficiency Type of Investment: Senior Debt Total project size (€ m): 9.1 eeef investment size (€ m): 8.5 Financial close: 3 April 2014 Maturity: 15 years Status: Implementation phase</p>
General description	
<p>The City of Venlo signed a long-term financing contract for € 8.5m to finance street lighting upgrades with the objective of equipping a minimum of 16,000 lighting points with LED lights (73% of the total lighting points of the city) and achieving more than 40% energy savings. The existing public lighting is the largest consumer of electricity with approximately 36% of total consumption of the municipality. The large-scale street lighting upgrade is a further sign of the city's commitment towards environmental sustainability including, among other things, being one of the first cities in the world to support the principle of 'Cradle to Cradle' (C2C), a framework for using sustainable energy resources only, phasing out conventional energy sources.</p>

Project: Universidad Politécnica de Madrid	Country: Spain Sector: Energy Efficiency Type of Investment: Forfeiting Total project size (€ m): 2.5 eeef investment size (€ m): 2.5 Financial close: 18 November 2015 Maturity: 9 years Status: Construction
	
General description	
<p>eeef provided financing for the replacement of existing oil boilers providing hot water and heating to the Universidad Politécnica of Madrid (“UPM”). The retrofit of new gas boilers, thermal valves and thermal PV solutions will be completed in 32 buildings of the UPM. The project will realise 27 % of Primary Energy Savings and 45 % CO₂e savings annually compared to baseline. The transaction resulted from the public tendering process launched by the UPM earlier this year. Ingeniería y Servicios de Eficiencia Energética S.L. (“Enertika”) was awarded with the nine year mandate, and the Energy Management Contract (“EMC”) was signed on the 4th of September 2015. The EMC will consist of measures to provide and install the technology required to upgrade existing infrastructure and perform operation and maintenance services as required to ensure optimal performance of the new technology.</p>
